# Selecting a Compelling and Feasible Research Topic

---

The foundation of a successful research paper begins with choosing the right topic. It should be both interesting to you and relevant to your field to sustain motivation throughout the process. Start by exploring current trends, gaps in existing research, or unresolved questions within your discipline. Conduct preliminary literature reviews to ensure there's enough material to support your study.

Narrow down broad ideas into specific, manageable research questions. For example, instead of tackling 'climate change,' focus on 'the impact of urban green spaces on local air quality.' This specificity helps in defining clear objectives and methodologies. Remember to consider the available resources, time constraints, and your expertise when selecting a topic.
